

Website Chatbot

With our website chatbot widget, any website can now have a chatbot for answering support or inbound marketing queries with our simple integration. All you must do is to build a chatbot in Engati and integrate the chatbot in your website by just pasting a couple of lines of our cross-platform JavaScript code in your website code. It's easy and simple.

01

Just click on the **Website chatbot** tab in the Channels section of app.engati.com

You will get to see a script and initialization script in the section.

02

Copy those two scripts and paste it in your website code.

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>Engati webbot demo</title>
5     <link href='\"css/style.css\"' type='\"text/css\"' rel='\"stylesheet\">
6   </head>
7   <body>
8     <p>your webcccontent here</p>
9   </body>
10
11   <script src='\"https://app.engati.com/static/js/chat_widget.js\"></script>
12   <script>EngtChat.init({\"bot_key\": \"fsny3v3r4cdh32svg\", \"e\": \"p\", \"bot_name\": \"
13     engati\"});</script>
14 </html>
```

Now launch your website you will be able to see a chat widget at the bottom corner of your website. Click on it and you will see a chat section to chat with website.
